

INNER COVERS

BY: **EBNER FURNACES, INC.**

We now **COVER** all the Bases

ASME Certified

The greatest number of Hydrogen annealing bases in domestic operation have the name **EBNER** proudly displayed on their exterior. There is a reason for this: The name on that placard is recognized in the steel industry as synonymous with performance, value, attention to detail, and unrivaled quality.

An integral part of any successful batch annealing operation is a high quality inner cover. Regardless of who manufactured your annealing furnaces, you can now get inner covers with the same level of quality and value we produce for our own furnaces for applications originally designed by others.

We can build an inner cover to your print or we can address shortcomings that you may have with your existing design/s.

EBNER operates a modern and efficient manufacturing facility in Wadsworth, Ohio employing lean manufacturing techniques, advanced technologies and automatic welding systems. Our manufacturing and project staff have extensive experience working with and manufacturing the best bell annealing equipment available. Let us show you why there is a difference in cover manufacturing.
